	J0	No LIFTING CAPACITY		
		2,2 x 2,2 m	3,6 x 3,6 m	4,4 x 4,4 m
STABILITY AREA				

STABILITY EXAMPLES

Example 1:
Square stability area.

$X = 4,4 \text{ m}$
 $Y = 4,4 \text{ m}$
 $d = 2,2 \text{ m}$

Example 2:
Asymmetric stability area.

$$\begin{aligned} d_a &= 1,9 \text{ m} \\ d_b &= 2,2 \text{ m} \\ d_c &= 1,3 \text{ m} \\ d_d &= 1,3 \text{ m} \end{aligned}$$

Example 3:
Close outriggers stability area.

$$\begin{aligned} X &= 0,6 \text{ m} \\ Y &= 5,0 \text{ m} \\ d_a &= 0,3 \text{ m} \\ d_b &= 2,5 \text{ m} \\ d_c &= 0,3 \text{ m} \\ d_d &= 2,5 \text{ m} \end{aligned}$$

d_b and d_d should be J7 geometrically but is limited to J0 anyway because too narrow.

REMARKS REFERRING TO LOAD CHART

- The load charts are calculated according to EN 13000.
- For the calculation of the load charts at least a wind speed of 9m/s (33km/h) and regarding the load a sail area of 1m² per ton load and a wind resistance coefficient of 1.2 on the load have been taken into account. For lifting of loads with large sail areas and/or high wind resistance coefficients the maximum wind speed as stated in the load charts has to be reduced.
- Lifting capacities are given in kilograms.
- The weight of the hook blocks and hooks is part of the load and therefore it must be deducted from the lifting capacities.
- Working radii are measured from the slewing centre.
- The lifting capacities given for the telescopic boom apply if the folding jib is removed.
- Subject to modification of lifting capacities.
